## Maco C-TS Stable Door Lock

### Maco C-TS Stable Door Lock

The Maco C-TS Stable Door Lock system is the latest addition to the C-TS 'combined' door lock range.

The striker plates and sash and frame prep are the same as with the previous G-TS product so it is an easy upgrade for fabricators to make.

The bottom lock features a key operated (wind up) lock case so no handle is required on the lower door, just a profile cylinder and escutcheon (also available from VBH). The top door features a C-TS lock which can be used as a standard lift/lever (lever/lever) or, if preferred, as a split spindle lock. This is achieved by simply replacing the solid spindle supplied with the handle with a Maco C-TS Split Spindle Kit.

The new stable door lock features solid steel tapered hooks, which combine superb strength and weather tightness with the smoothness of operation associated with C-TS locks.

Another big benefit is the fact that there are two choices of vertical shootbolt length on the bottom lock. The shootbolt locks into the bottom of the top lock's faceplate when the door is opened as a full length unit to hold both halves together. The standard option is ideal where there is no transom to pass through. The longer 41mm bolt will allow the fabricator to fit the locks' horizontal face plate return to the bottom sash (rather than to the transom) and the bolt will pass through a simple hole in the transom before locating into the top lock. This simplifies and speeds up the fabrication process.

Drawings and VBH ordering codes can be found overleaf.

#### Benefits at a glance:

- C-TS top lock allows lever/lever or lever/pad (split spindle) function
- Steel hooks for supreme strength and durability
- C-TS lock case and tapered hooks for ultra-smooth operation and excellent weather tightness
- Standard or extended shootbolt simplifies and speeds up fitting process
- Sashes can be opened together as one unit, or top sash can be opened while bottom remains locked – true stable door
- Easy latch reversal and Maco Silent Latch Function for smooth latching
