## Maco Mullion Free Lock

### Maco Mullion Free Lock

Timber double doors with 4mm air gap can now benefit from the new Mullion Free Double Door Lock system from Maco.

The system utilises two C-TS lever operated locks, which combine to provide a secure central meeting stile with a smooth locking action. The lock on the master leaf locks into that on the slave leaf, but only after the slave lock has been thrown into its locked position. This means the door pair can only be left in a fully locked state, eliminating the risk of leaving it not fully secured.

The master lock features solid steel hooks for excellent security, helping the lock to achieve a pass at PAS24:2012 testing when fitted with PAS24 shootbolts. Smooth operation is ensured by tapered hooks locking into striker plates and hook receiver pockets with ample adjustment.

C-TS locks can be used as a standard lift/lever lock or as a split spindle lock for doors where access should only be available from outside via a key. This is achieved by fitting a C-TS split spindle kit rather than a solid spindle. The standard latch retention device holds back the latch, preventing accidental lock-outs when the lock is fitted with a split spindle.

C-TS locks feature a sturdy 3mm thick faceplate in a choice of 16 or 20mm widths.

#### Important note -

The Mullion-Free door lock must be set with a 1050mm handle height.

VBH order codes and routing drawings can be found overleaf.

E &OE  
CUS PB 14/04/15

#### Benefits at a glance:

- Secure locking as master and slave locks lock together. Master cannot be locked until slave is thrown into locking position
- Fully adjustable locking points for smooth locking action
- C-TS locks can be used as lift/lever or split spindle operation
- PAS24:2012 security tested (with PAS24 shootbolts)
- 480 hours Class 5 EN 1670 corrosion resistance
- Endurance tested to 50,000 full operations with 200,000 latch cycles
- 16 or 20mm faceplates (20mm coming soon)
- Works with standard 92PZ door handles
- 10 year Maco warranty
- Approved under MACO Secure Plus scheme
- Secured by Design approved
