WD-40 White Lithium Grease Lubricant

WD-40 White Lithium Grease Lubricant

WD-40 White Lithium Grease is ideal for metal to metal applications that require heavy duty lubrication and sound protection against rust and corrosion.

The product is easily applied as a spray and dries to form a hard wearing protective barrier that will not run off, melt or freeze.

It is effective at temperatures from 0 - 300° Fahrenheit (18 - 149° Centigrade) and can be used internally or externally. This makes it particularly useful for lubricating hardware such as hinges.

Health and safety data is available upon request.

Note: WD-40 White Lithium Grease replaces SG85 White Grease which is no longer manufactured.
