Yale Adjustable Replacement Door Handle

Door Handle with Variable Fixing Positions

The Yale Replacement Door Handle is an ideal product for anyone involved in the repair and maintenance of doors fitted with multi-point door locks, or indeed anyone supplying hardware to the trade or general public either through a shop, trade counter or website.

The handle can be used on most PVCu, composite, timber or aluminium doors fitted with a 92mm PZ door lock. The ingenious design allows the handle to be used to replace most 92PZ door handles, regardless of where the fixing holes are, meaning no holes will be visible on the door after the repair. The handle's fixing lugs can be positioned to correspond to the holes already on the door. Once the fixing lugs on the external backplate have been positioned correctly, the outer handle is attached to the backplate with 4 concealed screws. The inner backplate is then fixed to the external backplate/handle through the door in the normal way, before finally the internal handle is fixed to the inner backplate to leave a neat finish with all fixing holes concealed.

The adjustable fixing positions mean the repairer no longer needs a large selection of door handles to carry out a handle replacement in one visit, saving him the cost of stock. A 1-visit repair not only saves time, money and the hassle of sourcing a suitable handle, but also means immediate payment for the job and a happy customer who will recommend to friends.

Yale Replacement Handles are supplied in individual blister packs. Full instructions are supplied with each handle, along with screws and spindles to cover doors from 45 – 70mm door thicknesses without the need for cutting down. Each set also includes 2 spring cassettes to prevent handle droop caused by wear on the lock's mechanism.

The blister packs make the Yale Replacement Door Handle ideal for retail via shops, trade counters or websites and also protect the handle whilst being carried on a repairer's van.

Door Handle with Variable Fixing Positions
