greenteQ Q-Bolt Multi-Point One-Piece Door Lock

The Q-Bolt multi-point door lock range offers secure locking solutions for single and double doors in all materials.

The standard 'Single Door' and 'Double Door' locks have a 2200 x 16mm croppable faceplate and feature 3 strong hooks for security and 2 outboard rollers for compression adjustment.

The outer hook centres are 1490 and 1190mm respectively. Both versions have serrated teeth on the rear drive train to allow the fitting of top and bottom shootbolts. At 1190mm centres, the hooks and rollers on the double door version are closer to the centre to provide the optimum spacing between the centre hook to the outer hooks and then again from the outer hooks to the shootbolts.

The top and bottom hooks and rollers travel in opposing directions (Top hook up/bottom hook down).

'Single Door' locks offer a choice of either a sprung solid single spindle follower or split follower for lever/lever or lever/pad operation respectively. The split spindle locks feature a latch hold-back snib to protect against accidental lock out. 'Double Door' locks all have single spindle followers.

Q-Bolts should be operated by unsprung door handles such as the long or short backplate versions of the greenteQ Alpha series.

The simple procedure to reverse the handing of the latches and the split follower orientation is carried out from the front of the lock.

To complement the 'Double Door' version there is also a slave door lock. We always recommend the fitting of shootbolts on both leaves of a pair of double doors.

The 'Composite Door' lock completes the range. This has a non-croppable 2040 x 20mm faceplate with radiused ends to fit into a routed slot on the composite slab and features 3 hooks for security and compression.

The 16mm faceplate locks work with 1-Piece striker plates and profile related packers, while the 'Composite Door' version has its own adjustable individual striker plates.

greenteQ Q-Bolt Multi-Point Door Lock

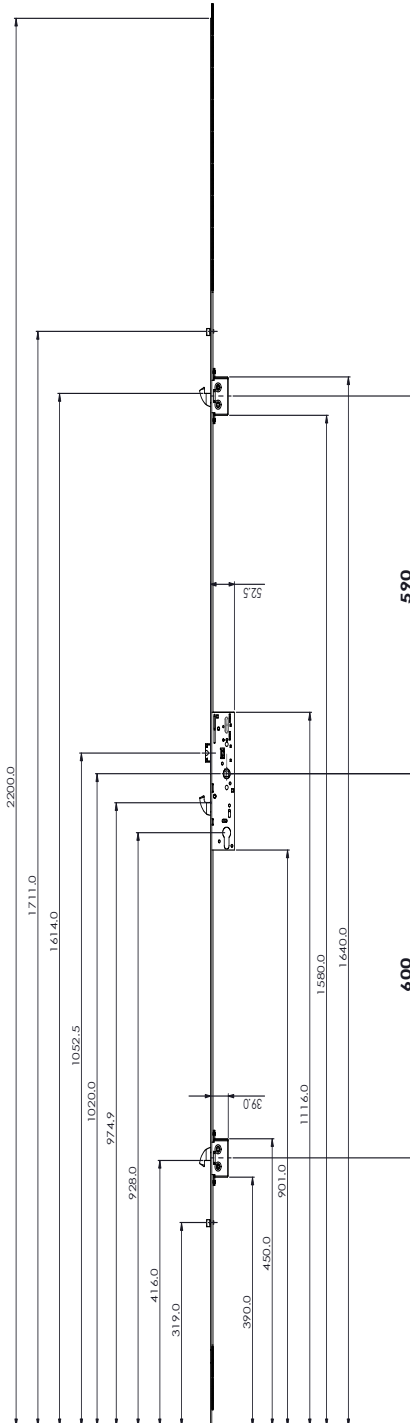

Benefits at a glance:

- 3 strong hooks provide peace of mind while rollers ensure smooth operation
- Single or split spindle followers for lever/lever or lever/pad operation
- Suitable for all materials
- Small hook cases mean minimal routing of the sash profile
- 1-Piece striker plates feature guide marks to correspond to markings on bolt for ease of fitting
- Special Q-Bolt for timber and composite doors
- 92mm PZ dimension works with standard unsprung handles
- Handing of lock can be easily changed from the front
- Latch hold-back snib on split spindle versions prevents accidental lock-out
- UK manufactured
